

## Dermal Support

## Real Results For the complete horse

**Dermal Support** is a unique "Functional Food" designed to assist your veterinarian in helping to reduce the onset of various skin disorders, which can affect most horses at some stage throughout their life.

One of the following may be causing an abnormality with your horse's skin and coat which should be investigated.

- Fleas
- Seasonal allergies
- Stress or boredom.
- Sweetitch
- Food allergies
- Metabolic or hormonal problems

Using **Dermal Support** as directed by your veterinarian can:

- Helps to improve coat and skin condition
- Helps to reduce localised itching and scratching
- Helps destroy harmful bacteria systemically
- Helps to support / modulate the immune system.
- Helps maintain normal histamine levels

Equine skin conditions are often difficult to diagnose and frustrating to treat, with causes ranging from fungus to allergens to who knows what.

Once the integrity of a horse's skin is compromised, it is not only the site of the irritation that's a problem, but the general health of the horse, since the immune barrier has been breached.

Skin diseases in horses are prevalent throughout the year, although some may be seasonal. They may be due to infectious agents (e.g. bacteria, viruses, fungi, parasites) or environmental irritants.

By knowing what may be triggering a horse's skin condition, you can determine the best treatment option to help alleviate discomfort and bring the horse back to optimal health.

**Dermal Support** works systemically to allow the natural defence mechanisms to help manage the source of the problem, and is safe to use in conjunction with most medications prescribed by your veterinarian.

### Ingredients:

Organic Whole mushroom powder – 5 Species  
Omega 3 rTG, EPA+ DHA  
Golden Flaxseed- ALA  
Saccharomyces Cerevisiae CNCM I-1077 (cfu\*/g) 20 Billion  
(European Authorization: E1711/4b1711/4a1711E)

### Serving Suggestions:

Mix the powder with a small amount of warm water and mix into a paste - apply to feed.

## Antioxidants

Free radicals are formed daily which are damaging to the whole body. Antioxidants act as scavengers to prevent cell and tissue damage.

Down regulates oxidative stress, support a balanced immune system, which respond to allergens or infections.

## Omega 3

Omega 3 is required for synthesis of inter cellular connecting substances. The long-chain omega-3 fatty acids (EPA) and (DHA) are important in generating bioactive lipid mediators important in helping reduce inflammation.

## Probiotics

These are required to maintain a healthy gut environment where most of the body's immune system is located.
